ABSTRACT

This landmark report delivers an in-depth analysis of the fast changing $3B+ battery management IC market. The requirement for power-efficient and high performance solutions in Li-Ion/Poly battery-powered devices continues to open profitable growth opportunities for existing IC vendors (profit-driven Linear Technology is a major participant) as well as for numerous start-up entrants.

Battery management ICs are application-specific and analog-intensive mixed-signal ICs used in numerous end-systems and their battery packs. The complexity and variety of battery management ICs is driven by end-equipment types, battery types, and battery management architectures.

The report provides the product classification and market segmentation used in our bottom-up analysis of products and vendors. The report analyzes various battery charger, fuel gauge, protection, and authentication ICs – more than 600 core products of twenty vendors and eleven end-systems; these core products constitute about 3,000+ standard products. Standalone charger ICs alone accounted for about 1.9B units and $1.4B revenues in 2009, while standalone fuel gauge ICs accounted for about 1.6B units and $1.4B in revenues.

The report classifies battery charger ICs into a five-level hierarchy by integration, topology, algorithm execution, input power sources, and application attributes. Fuel gauge ICs are classified by algorithm execution (intelligence), integration, battery chemistry, cell configuration, and protection and monitoring features.
End-equipment power is segmented into three main power levels; energy harvesting devices and electric vehicles are separate emerging segments.

Bipolar is a must process technology for battery management ICs — the use of BiCMOS and BCD dominates. The trend toward universal adapters (“chargers”) requires an added degree of protection and favors increasing use of BCD technology.

Linear Technology offers 78 core products — three standalone fuel gauge ICs and 75 core battery charger ICs:

### Single Function Charger ICs:

<table>
<thead>

</table>

In comparison, the start-up AnalogicTech offers only a single function standalone charger ICs targeted at mass market applications featuring a single cell Li-Ion/Pol battery and USB 2.0 compliant power source.

# TABLE of CONTENTS

(106 pages, 62 figures)

1 INTRODUCTION

2 KEY FINDINGS

3 BATTERY MANAGEMENT LANDSCAPE TRENDS
   3.1 End-Equipment System Trends
   3.2 Battery Technology Trends
   3.3 Battery Charging Trends
   3.4 Industrial Design and Marketing Trends

4 BATTERY MANAGEMENT ARCHITECTURES and IC TYPES
   4.1 Battery Management Architectures
   4.2 Battery Charger ICs
   4.3 Fuel Gauge ICs
   4.4 Protection ICs
   4.5 Authentication ICs

5 BATTERY MANAGEMENT IC SEGMENTATION
   5.1 Product Segmentation by End-Equipment Power Levels
   5.2 Charger IC Product Segmentation
   5.3 Fuel Gauge IC Product Segmentation
   5.4 Protection IC Product Segmentation

6 BATTERY MANAGEMENT IC IMPLEMENTATION TRENDS
   6.1 Functional Integration
   6.2 Process Technologies

7 BATTERY PACK IMPLEMENTATION TRENDS
   7.1 Single Cell and Multicell Batteries
   7.2 Li-Ion/Polymer and Multi Chemistries
   7.3 Battery Pack IC Integration Trends
   7.4 Smart Battery Standards and Implementations

8 MARKET SIZE, GROWTH, and TRENDS (units and revenues, 2009-2014)
   8.1 Market Segments by End-Equipment Type
   8.2 Standalone Charger and Fuel Gauge ICs by End-Equipment Type
   8.3 IC Vendors Market Share (2009) for Charger and Fuel Gauge ICs

9 EMERGING BATTERY MANAGEMENT APPLICATIONS
   9.1 Energy Harvesting
   9.2 Electric Vehicles

10 IC VENDOR ANALYSES
   10.1 Texas Instruments
   10.2 Linear Technology
APPENDIX – Analog ICs Market View

1. Analog IC Definition
2. Analog ICs Segmentation
3. General-Purpose Category
4. Application-Specific Category
5. Analog ICs Market Data (2008 to 2010)

LIST of FIGURES

1. Battery Management Landscape Trends—Portable Devices
2. Power System Design Flow vs. Market/Product Segmentation
3. Battery Management ICs and Architecture
4. USB Compliant One-Cell Li-Ion/Pol Charger IC (TI’s BQ24180)
5. In-System Fuel Gauge for Smart Phone System (TI’s BQ27505)
6. Smart Battery System (SBS) Architecture
7. Battery Management IC Types
8. Battery Charger IC vs. End-Equipment Systems—The Big Picture
9. USB Connector Based Battery Charging
10. Battery Charger IC Functionality—The Big Picture
11. Battery Charger IC Implementation Domains
12. Switching Standalone Li-Ion/Pol Charger IC (TI’s BQ241xx family)
13. Switching Host-Based Li-Ion/Pol Charger IC (TI’s BQ24753)
14. Standalone Single-Cell Li-Ion/Pol Battery Fuel Gauge IC for Portable Applications (TI’s BQ27101)
15. SBS 1.1 Compliant Fuel Gauge and Protection-Enabled IC (TI’s BQ20z75-V180)
16. One-Wire Battery Monitoring IC for Mobile Phone and PDA Applications (TI’s BQ2023)
17. Future battery Management Architecture for Single-Cell Li-Ion/Pol Applications
18. Standalone Fuel Gauge IC for In-System Applications (TI’s BQ27500)
19. Voltage Protection IC for Multicell Li-Ion/Pol Batteries (TI’s BQ29400)
Battery Protection AFE for Multicell Li-Ion/Pol batteries (TI’s BQ29312A)
Charger Front-End Protection IC for Li-Ion/Pol Batteries (TI’s BQ24308)
Battery Pack Security and Authentication IC for Portable Applications (TI’s BQ26150)
Charger ICs Product Classification Tree
Charger ICs Product Classification Methodology
Charging Algorithm (Intelligence) Implementation Trends
Fuel Gauge ICs Product Classification Tree
Overview of Battery Management ICs for Portable Devices Using Li-Ion/Pol Batteries
Charger IC Implementation Trends
Fuel Gauge IC Implementation Trends
Li-Ion/Pol Battery Pack Implementation Trends
End-Equipment Segmentation
End-market vs. Product Segmentation
Standalone Charger and Fuel Gauge ICs by Li-Ion/Pol Battery-Powered End-Equipment Type
Battery Charger and Fuel Gauge ICs Vendor Market Share
Battery Management ICs—Top Level Overview by Vendor
Single Function Linear Charger ICs—Major Product Categories by Vendor
Single Function Switching Charger ICs—Major Product Categories by Vendor
Multifunction Charger ICs—Major Product Categories by Vendor
Standalone Fuel Gauge ICs—Major Product Attributes by Vendor
Monitor ICs—Major Product Attributes by Vendor
Vendor Market Emphasis by End-Equipment Segment (Li-Ion/Pol Batteries)
